

Tequila Sunrise Bot

This contraption makes tequila sunrise drinks. To make a drink:

1. Place a cup under the spout. Make sure the black hoses are aimed into the cup!
2. Press the **normal** button to make a regular strength tequila sunrise drink or press the **strong** button to make a stronger tequila sunrise drink.
3. Wait for your drink to be made. Once all three motors stop, your drink is ready! Bottoms up!

If something goes wrong and you want to stop the bot, press either button while it is dispensing and it will stop.

What if you don't like tequila sunrise drinks? Please hack this bot to have it make another drink! Scan the QR code to go to GitHub where you can download the source code for the bot. We have an Arduino sketch that you can use with the standard Arduino software from <http://arduino.cc>.

The code is not very long and well documented. Give it a quick look see, then hack new proportions for your new drink. There is a programmer attached to the bot so you can program the Arduino Uno yourself.

If you hack the bot, you're responsible for buying new booze and setting it up. We recommend running water through the hoses and rinsing off the hoses before you setup you own drinks.

Have fun!
